No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Journal of Mathematical Psychology

A Forum for the Discussion of Timely and Exciting Efforts to Provide Precisely Stated Psychological Theories

Editor: James T. Townsend

Department of Psychological Sciences, Purdue University, West Lafayette, Indiana

Journal of Mathematical Psychology presents research articles, monographs and reviews, notes and comments, and book reviews in all areas of mathematical and theoretical psychology. The journal is concerned with empirical research directly relevant to theoretical questions within psychology. Articles dealing with the development or experimental testing of psychological *process models* are particularly emphasized. Work in fundamental measurement continues to fall within the journal's areas of interest.

Some research areas covered include:

- work in fundamental measurement or scaling
- psychometric research that bears on the explication of psychological concepts or process models
- artificial intelligence and computer simulation (e.g., computational vision as applied to human vision) of psychological processes
- learning and memory
- motivational dynamics
- neuropsychological theories
- perception and/or psychophysics
- psycholinguistics
- problem solving
- human factors and human-computer interaction

The following list is representative of the articles published in this journal:

JOHN K. DAGSVIK. Discrete Dynamic Choice: An Extension of the Choice Models of Thurstone and Luce

R. DUNCAN LUCE AND LOUIS NARENS. Symmetry, Scale Types, and Generalizations of Classical Physical Measurements

DANIEL N. OSHERSON, MICHAEL STOB, AND SCOTT WEINSTEIN. Note on a Central Lemma for Learning Theory

J. ACZÉL AND T. L. SAATY. Procedures for Synthesizing Ratio Judgements

HANS COLONIUS. A Characterization of Stochastic Independence by Association, with an Application to Random Utility Theory

DONALD L. FISHER AND WILLIAM M. GOLDSTEIN. Stochastic PERT Networks as Models of Cognition: Derivation of the Mean, Variance, and Distribution of Reaction Time Using Order-of-Processing (OP) Diagrams

AMOS TVERSKY, YOSEF RINOTT, AND CHARLES M. NEWMAN. Nearest Neighbor Analysis of Point Processes: Applications to Multidimensional Scaling

LAURENCE T. MALONEY. Nearest Neighbor Analysis of Point Processes: Simulations and Evaluations

RICHARD SCHWEICKERT AND GEORGE J. BOGGS. Models of Central Capacity and Concurrency

PATRICK SUPPES, MICHAEL COHEN, ROBERT LADDAGA, JAMES ANLIKER, AND ROBERT FLOYD. A Procedural Theory of Eye Movements in Doing Arithmetic

Volume 29 (1985), 4 issues ISSN: 0022-2496

Annual Subscription Rates:
U.S.A. and Canada: $120.00
All other countries: $143.50

Sample copies are available on request. Personal subscription rates are available.
